

A filter with no exceptions is untested.

The rule was right 99% of
the time. The 1% was a
parked delivery van, and it
mattered more than the 99.

It has only met your test
data.

The legitimate case it breaks

THE CONCUSSED WITNESS

exhibit 01

LocationManager

Any rule strict enough to be useful will be wrong for some real case. That is not a failure of the rule. It is what rules are.

The Loopdown

swipe

An unnamed carve-out reads as a bug

Any rule strict enough to be useful will be wrong for some real case. That is not a failure of the rule. It is what rules are.

Every exception earns three things

01 A name

not an unexplained && in a condition

02 A comment with the reasoning

the why, so the next person cannot delete it

03 A test that pins it

the parked van becomes a fixture

04 A hunt for the next one

write the rule, then go looking

An undocumented special case looks exactly like a bug

And it gets removed like one, during a cleanup,
by someone reasonable.

Give it a name, a reason, and a test.
